

TRACK & TRACE, FLEET MANAGEMENT & ANTI-THEFT SYSTEM

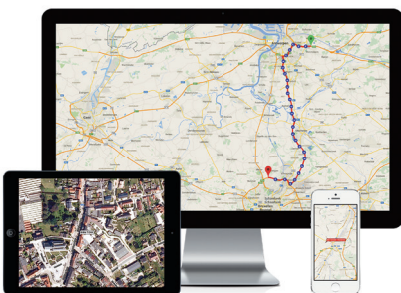

DIGITAL **JOB REGISTRATION**

Reduce your administrative burden and get more insight with our solution: your employee immediately knows where which jobs are to be carried out by consulting his smartphone or tablet. Plus, you are able to manage and monitor everything via the web application!

SIMPLE & EFFICIENT

Paper work orders quickly get lost or become unreadable. That may cost you valuable time. Our solution: centralize everything in a single platform! The status of all completed jobs is recorded in the app, allowing you to subsequently make a detailed calculation per site and per job.

YOUR BENEFITS

- ✓ **Simple planning**
First, you allocate all daily tasks to your employees. Our app on their smartphone immediately tells your employees which job they have to carry out at the specified address and date: the digitised work order!
- ✓ **Overview of completed tasks**
The data recorded via the smartphone is transmitted to the office, where our application provides you with a detailed overview of the hours worked on each job at the relevant site.
- ✓ **Navigation and overview of kilometres driven**
Based on the vehicle's location and using the navigation software installed on the smartphone, the system immediately links the route description to the site for each job to be carried out. In addition, you receive a detailed report on the (mobility) kilometres driven.
- ✓ **Checkin@work (optional)** CHECKIN AT WORK
If your site is subject to social security tax, your employees will also be automatically registered with checkin@work.
