

TRACK & TRACE, FLEET MANAGEMENT & ANTI-THEFT SYSTEM

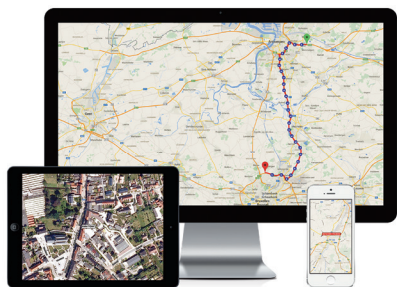

MONITOR **THE TEMPERATURE** OF YOUR CARGO

The GeoTracer web application allows you to keep an eye on the temperature of your refrigerated transport vehicles.

EFFICIENT & ACCURATE

When your refrigerated transport is en route, it's not always possible to keep track of the temperature: If the actual temperature deviates from the set point due to a technical defect, you will not be able to take timely action. GeoTracer lets you know at any time how your goods were transported or delivered and at which temperature.

YOUR BENEFITS

- ✓ **Monitoring temperature**
With the GeoTracer temperature recording system you no longer need to worry: you can monitor the temperature of your refrigerated transport vehicles at all times via our web application. You know at any time how your goods were transported or delivered and at which temperature.
- ✓ **Guaranteed temperature**
In addition, we maintain the complete temperature history, in table or graphic format. These records can therefore also be used as evidence.
- ✓ **Act in time**
If the temperature deviates from the set temperature, you are immediately notified of the rise or fall in temperature on your screen or via SMS/email. This enables you to take timely action and avoid serious financial loss!
- ✓ **Various options**
We can read out the temperature digitally via a temperature sensor, an RFID tag or via the interface to the existing reading system.
