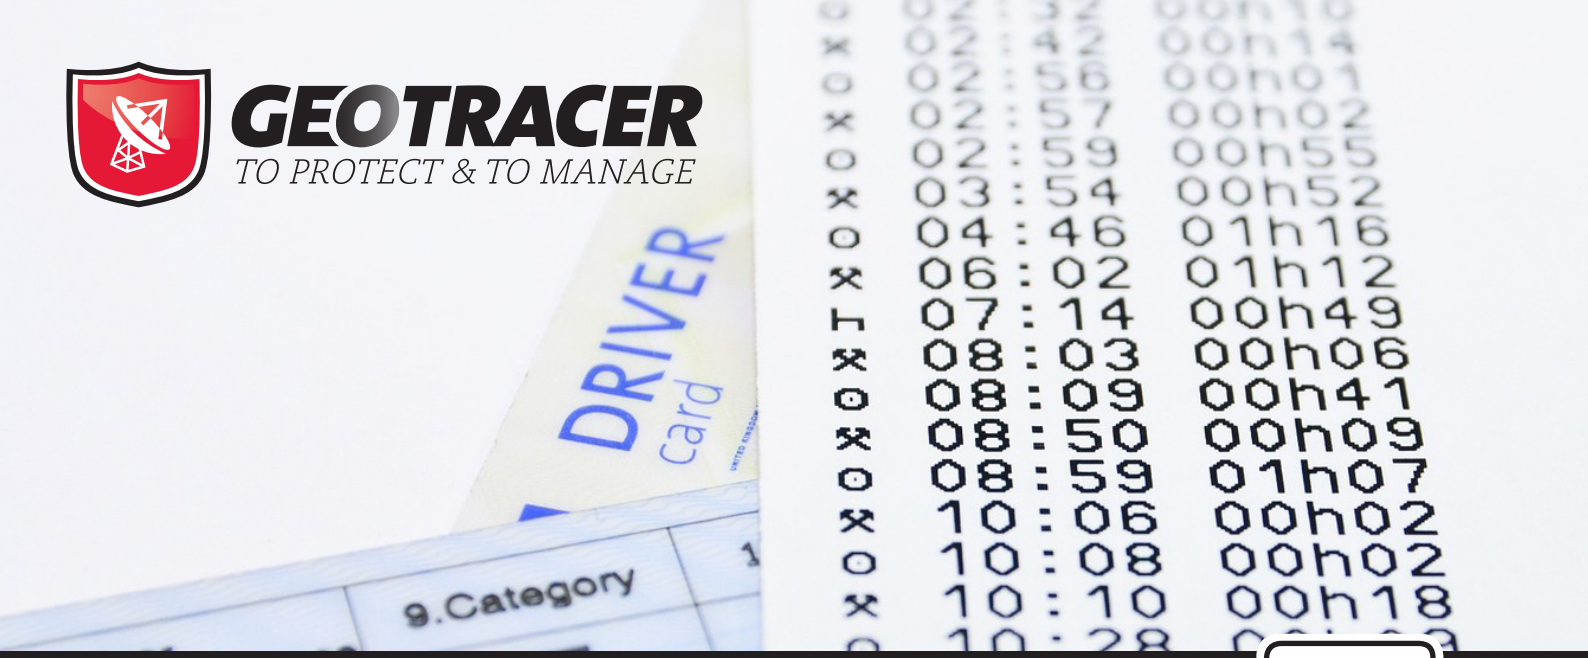
GEOTRACER
TO PROTECT & TO MANAGE



TRACK & TRACE, FLEET MANAGEMENT & ANTI-THEFT SYSTEM

TRANSMIT YOUR TACHOGRAPH DATA WIRELESSLY

GeoTracer provides a solution for the remote transmission of tachograph data! With our system you no longer need to do this manually, your data is downloaded digitally and wirelessly.

EFFICIENT & RELIABLE

You are required by law to retain your tachograph data for a number of years. However, your tachograph has a limited memory. That is why, until this day, companies manually transmit this data to external storage media. But why make things difficult when you can choose the option provided by GeoTracer?

YOUR BENEFITS

FROM 1 EURO* PER DAY

- ✓ **Transport regulatory compliance**
  Our software allows you to download and archive all tachograph data in accordance with European legislation, without any time or memory limits.
- ✓ **Save considerable time, money and effort**
  All your tachograph data is read out remotely: you no longer have to wait for the truck to be physically present to manually transmit the data. The GeoTracer system allows for fully digital and wireless downloads.
- ✓ **Track & Trace included**
  In addition to remote downloading of your tachograph data, the GeoTracer unit also provides correct geolocalisation of your truck, the history of the route travelled and the stops, and sends an alarm notification in the event of improper use or theft.

*per vehicle, including hardware, installation and subscription fee (price calculated based on 15 trucks and a 60-month contract)
